Professional Summary

Computer Science undergraduate at Bahria University (Islamabad) with a strong foundation in **C++** and core programming concepts including data structures and object-oriented programming. Comfortable with Python, SQL, and web fundamentals (HTML/CSS), and experienced building desktop applications with Qt. Has built several full-stack web, mobile, and database projects to grow practical, hands-on development skills. Actively seeking software engineering internships to learn from a professional team and contribute as a developer.

Projects

Hisaab — Personal Finance & Receipt Manager (Solo)

2026

Flutter · Node.js · PostgreSQL · React · Firebase

github.com/sameer-hassan01/QEEMAT

- Designed and built a full-stack, offline-first personal finance app for Pakistani users featuring on-device OCR receipt scanning, expense and income tracking, budgets, subscriptions, grocery price comparison, and a rewards system
- Architected three coordinated codebases solo: a **Flutter mobile app** (Riverpod, GoRouter, Dio, Hive offline cache), a **Node.js + Express REST API** backed by PostgreSQL with raw SQL via *pg*, and a **React + Vite + Tailwind admin panel**
- Integrated Firebase Authentication (email, Google, phone OTP) with JWT-backed API sessions, signed Cloudinary uploads, and secured every route with Helmet, rate-limiting, and express-validator
- Implemented offline support via Hive cache and background sync queue, plus a rule-based local insights engine that runs without any paid LLM or external AI calls
- Deployed entirely on free tiers (Render, Neon, Cloudinary, Vercel, Firebase) at zero monthly cost
- **Tech Stack:** Flutter, Dart, Riverpod, Node.js, Express, PostgreSQL, React, Vite, Tailwind, Firebase, Cloudinary, Google ML Kit

CineWorld — Cinema Ticketing & Management System (DBMS Semester Project)

2026

PHP · MySQL · HTML/CSS/JS

github.com/sameer-hassan01/cinemaManagement-DBMS

- Built a full-stack cinema booking and management web application end-to-end: user registration with role selection, movie browsing, day/time/seat selection, mock payment flow, and printable PDF tickets via FPDF
- Designed and normalised a 9-table MySQL schema covering users, movies, screenings, screens, seats, shows, bookings, contact messages, and upcoming releases
- Implemented a role-guarded admin dashboard for adding, editing, and deleting movies; viewing all bookings; and reading customer messages from the contact form
- Wrote every database query using *mysqli* prepared statements to eliminate SQL injection vectors; hashed passwords with PHP's *password_hash* (bcrypt)
- Integrated Cloudinary's free tier for movie poster hosting
- **Tech Stack:** PHP, MySQL, HTML, CSS, JavaScript, Cloudinary, FPDF, XAMPP

FoodBook — Community Food Review Platform (Team Project)

2025

JavaScript · REST APIs · Git

Collaborative MVP

- Worked with another developer to build the MVP of **FoodBook**, a community-driven food review platform
- Contributed feature slices including review submission, rating logic, and search, and wrote unit tests for the modules I authored
- Took part in bug-fixing during the beta phase, supported deployment, and participated in code reviews
- **Tech Stack:** JavaScript, REST APIs, Unit Testing, Git

University Coursework Projects

2023 — Present

C++ · Python · Qt · SQL · scikit-learn

Bahria University, Islamabad

- Built multiple coursework projects across Data Structures, OOP, Database Systems, and Machine Learning — including an intrusion-detection system project and ML pipelines in Python with pandas and scikit-learn
- Worked in small student teams using Git for version control, with end-to-end ML pipelines covering feature engineering, cross-validation, and model evaluation

- **Tech Stack:** C++, Python, Qt, SQL, scikit-learn, Git

Education

Bahria University

BS in Computer Science (specialisation: machine learning & data science)

August 2023 — Present

Islamabad, Pakistan

- Relevant coursework: Machine Learning, Deep Learning, Data Mining, Probability & Statistics, Data Structures & Algorithms, Database Systems, Operating Systems, Computer Networks
- Built end-to-end ML pipelines in Python (pandas, NumPy, scikit-learn) with feature engineering, cross-validation, and hyperparameter tuning

Islamabad College for Advanced Studies (ICAS)

A Levels in Mathematics, Physics, & Computer Science

August 2021 — June 2023

Islamabad, Pakistan

- Capstone project: a dynamic web application built with JavaScript and Flask

Fazaia Education System School

O Levels — Grade A in Computer Science

June 2020 — June 2021

Islamabad, Pakistan

- Foundational programming and problem-solving with hands-on projects in Python and basic web development

Technical Skills

Languages: C++ (proficient), Python, SQL, Visual Basic, HTML / CSS

Tools & Frameworks: Qt (Qt Creator & Qt Designer), Git & GitHub

Concepts: Data Structures, Object-Oriented Programming, Basic Database Design
